**A BIG BANG FOR PLASTIC RECYCLING**

Everyone knows about the massive global plastic pollution. Only less than 10% of all the plastic generated globally is recycled and instead you see plastic polluting the environment - trees, beaches, oceans, animals and even in food and water.

So why not use plastic better instead of wasting it? Industrial recycling is very expensive and beyond the knowledge of most people. So we have to empower the people to make change. Precious Plastics along with AMS-India is creating solutions that empower everyone worldwide to build up strong local networks of people turning plastic waste into valuable materials and inspire more people to take action!!

SMALL SCALE

The core of Precious Plastic and AMS-India solutions is to enable people to work with Plastics. We together create small-scale recycling machines which can easily be built by people without much technical and manufacturing expertise. We support you by providing the kits to build the machines on your own. You can also buy the machines from us and start your business of recycling plastic and making products which you can sell for profits.

SEMI INDUSTRIAL

Precious Plastic and AMS India presents a line of semi-industrial machines to process plastic waste and convert "waste to wealth. Individuals who wish to become entrepreneurs are given the support to establish their business by converting used plastic to more useful products.

## CREATE

Using AMS-India machines, just think of all the products made from plastic - all of them can be made again from recycled plastic as well. Household products, jewelry, art, furniture or construction material. Precious Plastic and AMS India together show how to create a big variety of inspiring outcomes, and keep on exploring more!!
